## **COVID-19 VACCINE**

Protect yourself, your loved ones, and your community. Get immunized when it's your turn!

**Questions?** Talk to your doctor about the vaccine and your health, especially if you are pregnant, breastfeeding, or have a chronic condition.

## The vaccines are:

- Canada has a rigorous vaccine review process
- Independent scientists reviewed all the data before approval
- Monitoring their safety is ongoing nationally and globally

- Protection up to 95% once fully immunized
- You may need two doses to have the best protection
- Most side effects are mild

- Available to anyone living in Canada (no cost in 2021)
- Distribution is happening in phases to manage supply
- Alberta's rollout plan guides distribution in our province

Please continue to follow public health measures even if you've had the vaccine.
