

Post-Donation Care of Living Kidney Donors

Recommendations for Primary Care Practitioners

CONSENSUS CONFERENCE

DATE:
Friday, April 17th, 2026

TIME:
11:00AM-2:00PM EDT

LOCATION:
Virtual (Zoom)

(Attendees are encouraged to attend the full conference)

Across Canada, there is a need for clear, consistent guidance to ensure living kidney donors receive high-quality post-donation care that supports their long-term well-being. To address this gap, a national consensus conference will be held to develop primary care-focused recommendations for the post-donation management of living kidney donors, informed by multidisciplinary expertise and lived donor experience.

This initiative is being led by Dr. Shaifali Sandal of the Research Institute of the McGill University Health Centre, and is supported by Canadian Blood Services.

On behalf of the co-chairs, we invite you to participate in this virtual conference to review, discuss, and evaluate recommendations developed in support of these goals.

WHAT IS A CONSENSUS CONFERENCE?

A consensus conference brings together medical professionals, patient advocates, and other stakeholders to develop practical, evidence-based recommendations.

WORK COMPLETED TO DATE AND EXPECTATIONS

A significant amount of foundational work has already been completed to prepare draft recommendations for your review. No pre-conference preparation is required—participants simply need to attend, engage in discussion, and vote.

AFTER THE CONFERENCE

Your contribution will inform a consensus report to guide best practices and supports consistent, high-quality post-donation follow-up care for living kidney donors across Canada.

HOW DO I CONFIRM MY PARTICIPATION?

To confirm your participation, please register at the link below:
